

REPUTEX EMISSIONS INTENSITY DATA – CONSULTING INDUSTRY

ABOUT REPUTEX

RepuTex is a leader in the field of quantitative carbon analysis and modelling. Since 1999, the company has developed world-class emissions modelling capabilities built on rich databases and systems for analysing the emissions of Asia Pacific economies.

With offices in Melbourne, Shanghai and Hong Kong, RepuTex applies its research globally to top tier consulting and accounting firms, top 500 corporates, fund managers and pension funds.

EMISSIONS INTENSITY DATA

RepuTex has developed a quantitative model to estimate emissions for a company, facility, product or process across the entire value chain of its operations, covering scope 1 (direct), scope 2 (electricity) and scope 3 (supply chain) emissions.

Notably, RepuTex's model is the first of its kind to break down scope 3 supply chain emissions into 'upstream' and 'downstream' emissions, enabling more detailed analysis of how, and where companies are likely to be impacted, directly or indirectly, by the CPRS and the flow-on costs of carbon.

In a market lacking emissions data, RepuTex information provides decision makers with a highly granular, low time/cost alternative to traditional emissions footprint data.

RepuTex analysis therefore fills a significant gap in the market, enabling firms to value/price carbon exposure, accurately identify carbon impacts, and pursue the most effective carbon mitigation strategies in a time and cost effective manner.

ACCESSING REPUTEX DATA

RepuTex emissions intensity data is made accessible to top tier consulting firms through a research retainer service which provides consultants with access to short form company reports, designed to facilitate internal marketing and strategy decision making.

RepuTex's research retainer service provides the consulting firm with on-going access to RepuTex analysts, facilitating the delivery of bespoke short form reports to assist specific marketing.

The retainer is constructed as follows:

- Access to RepuTex company short form reports *for S&P ASX 300 companies* including information on:
 - Scope 1,2,3 (value chain) emissions intensity estimates based on RepuTex proprietary modelling
 - Emissions by line of business activity
 - Benchmarking of value chain emissions intensity versus sub-industry competitors
 - CPRS eligibility
 - NGERs eligibility

REPUTEX EMISSIONS INTENSITY DATA – CONSULTING INDUSTRY

- Potential EITE status
- Direct carbon cost exposures (EBITDA liability)
- Premium retainer clients are given a higher level of access to Reputex's emissions intensity company universes, and increased access to Reputex analysts for bespoke short form reports and briefings.
- Access to Reputex short form reports for over 4,000 companies globally, including S&P ASX 300 companies, MSCI Developed World Index, S&P 1500, FTSE Asia Pacific (etc.)
- On-going access to Reputex analysts to request bespoke short form reports, for example covering private companies, MNCs, SMEs, sub-industry, sector analysis (etc).
